

# Challenges of sediment management in the Broads waterways

# Duck Broad

**DANGER**  
No Landing  
Mooring

## Conclusions from PRISMA

### Social

- Waterway users requirements can continue to be met
- Additional value to visitors from viewing wildlife

### Environmental

- Restoration or creation of threatened reedbed habitat
- Improved water quality through reduction in suspended sediment
- Habitat improvements for wildfowl and wetland birds

### Financial

- Viable projects can be designed with multiple benefits
- Short term investment in equipment can save long term costs through opening up new sediment reuse options
